vehicle

Site involves object (complex, mobile) made up of several complicated subsystems. During period object moved around & was moved around by people other than those normally supposed to have it. May involve vehicle similar to large missile transport: . Possibly something cylindrical raised up on top & swivel around. People who normally take care of it, & who were upset that it was gone, were a long distance away by the time the equipment was turned on or used. Apparatus "directs" something in a sense different from "aiming" as one would a firearm, but directs some sort of destructive power at whatever point desired. Mechanism involves a rounded, curved very smooth, shiny, silvery, glassy component near point where "destructive power" ~~leaves~~ exits the apparatus.
